Question: The fourth vertex **D** of a parallelogram ABCD whose three vertices are **A**(-2, 3), **B**(6, 7) and **C**(8, 3) is

**Solution:**

we know that, in a parallelogram,

$$A + C = B + D \quad (0.1)$$

$$\Rightarrow D = A + C - B \quad (0.2)$$

$$\Rightarrow D = \begin{pmatrix} -2 + 8 - 6 \\ 3 + 3 - 7 \end{pmatrix} \quad (0.3)$$

$$\therefore D = \begin{pmatrix} 0 \\ -1 \end{pmatrix} \quad (0.4)$$

Parameter	description
<i>A</i>	(-2, 3)
<i>B</i>	(6, 7)
<i>C</i>	(8, 3)
<i>D</i>	(0, -1)
